<tr><td>* English Course Description</td><td colspan="5">Course introduction: In this course, we will introduce plasticity models, deformation theory based variational principle, flow theory based variational principle, small deformation based elasto-plastic FEM, large deformation based elasto-plastic FEM, rigid plastic FEM, the key technologies for the implementation of numerical simulation, engineering applications of numerical simulations by elasto-plastic FEM and rigid-plastic FEM. This course is an important fundamental course for numerical simulation of metal forming processes.

Course objectives: (1) Understand different methods for metal forming process numerical simulation and relevant fundamentals of mathematics and mechanics; (2) Grasp the fundamental theories of elasto-plastic FEM and rigid-plastic FEM; (3) Understand the plasticity models and the methods to determine their parameters; (4) Get to know the state-of-the-art about metal forming process numerical simulation and the future trends; (5) Build the capability to use commercial software tools for metal forming process numerical simulation.</td></tr>

* English Syllabus	Chapter 1 Background of metal forming technologies and fundamentals of numerical simulation; 3 teaching hours (TH); In-class teaching and discussion Chapter 2 Calculus of variations about plastic deformation and flow law; 3 THs; In-class teaching and discussion Chapter 3 Small deformation theory-based elasto-plastic finite element method; 3 THs; In-class teaching and discussion Chapter 4 Finite deformation theory-based elasto-plastic finite element method; 6 THs; In-class teaching and discussion Chapter 5 Rigid visco-plastic finite element method; 3 THs; In-class teaching and discussion Chapter 6 Flow stress model, yield function, hardening model, forming limit curve and ductile fracture criterion and parameter calibrations; 6 THs; In-class teaching and discussion Chapter 7 Framework of numerical simulation system and advanced development; 3 THs; In-class teaching and discussion Chapter 8 Key technologies for rigid visco-plastic FEM implementation; 6 THs; In-class teaching and discussion Chapter 9 Key technologies for elasto-plastic FEM implementations; 6 THs; In-class teaching and discussion Chapter 10 Numerical simulation applications of rigid visco-plastic FEM; 3 THs; In-class teaching and discussion Chapter 11 Numerical simulation applications of elasto-plastic FEM; 3 THs; In-class teaching and discussion Chapter 12 Cutting edge questions on metal forming technologies and numerical simulation; 3 THs; In-class teaching and discussion
* Requirements	10-15
* English Requirements	Grading: In the last week, each student shall make a 10-15 minute presentation related with the course. After the course is finished, each student shall submit an review report or an academic report/article related with the course within 2 months.
